All methods to enter into upgrade mode

1> Keys mode(U-boot is running):

- Power on Vim.

- Long press 'Power' key without release

- Short press 'Reset' key and release

- Count 2-3 seconds and release the 'Power' key to enter into upgrade mode

2> Serial mode(For developers):

- Connect Vim and PC with a USB-to-UART module, do the necessary setups.

- Power on the Vim, and hit any keys immediately to stop autoboot. This step will

let Vim boot into u-boot mode.

- typing 'run update' on the terminal of u-boot as belowing:

run update

3> Force mode(Maskrom mode):

- Power on Vim.

- Short-circuit the two pads of 'M' register which located on bottom side of Vim.

- Short press 'Reset' key and release it to enter into upgrade mode.

Have Fun!
